**CSL202: Discrete Mathematical Structures**  
**Tutorial/Homework: 04**

---

1. Answer the following:

- (a) State true or false:  $2\sqrt{\log_2 n}$  is  $O(n)$ .
- (b) Give reason for your answer to part (a).

2. Answer the following:

- (a) State true or false:  $3^n$  is  $O(2^n)$ .
- (b) Give reason for your answer to part (a).

3. Consider functions  $f(n) = 10n2^n + 3^n$  and  $g(n) = n3^n$ . Answer the following:

- (a) State true or false:  $f(n)$  is  $O(g(n))$ .
- (b) State true or false:  $f(n)$  is  $\Omega(g(n))$ .
- (c) Give reason for your answer to part (b).

4. Show using induction that for all  $n \geq 0$ ,  $1 + \frac{1}{2^1} + \frac{1}{2^2} + \frac{1}{2^3} + \dots + \frac{1}{2^n} = \frac{1 - (\frac{1}{2})^{n+1}}{1 - \frac{1}{2}}$ .

5. Consider the following recursive function:

**F(n)**

- If ( $n > 1$ ) **F(n/2)**
- Print("Hello World")

Let  $R(n)$  denote the number of times this function prints "Hello World" given the positive integer  $n$  as input.

- (a) What is  $R(n)$ , in big-O notation as a function of  $n$ ?
  - (b) Give reason for your answer to part (a).
6. Consider the following recursive algorithm that is supposed to convert any positive integer in decimal to binary format.  $\lfloor \cdot \rfloor$  denotes the floor function,  $n\%2$  denotes the remainder when  $n$  is divided by 2, and  $\|$  denotes concatenation.

```

RecDecimalToBinary( $n$ )
- if( $n = 0$  or  $n = 1$ ) return( $n$ )
- return(RecDecimalToBinary( $\lfloor n/2 \rfloor$ ) ||  $n \% 2$ )

```

Prove that the above algorithm is correct.

7. Show that:

- (a) If  $d(n) = O(f(n))$  and  $f(n) = O(g(n))$ , then  $d(n) = O(g(n))$ .
- (b)  $\max \{f(n), g(n)\} = O(f(n) + g(n))$ .
- (c) If  $a(n) = O(f(n))$  and  $b(n) = O(g(n))$ , then  $a(n) + b(n) = O(f(n) + g(n))$ .

8. Consider the two algorithms given below. In the input,  $A$  denotes an integer array and  $n$  denotes the size of the array. Analyse the running time of these algorithms and express the running time in big-O notation.

```

Alg1( $A, n$ )
- for  $i = 1$  to  $n$ 
  -  $j \leftarrow i$ 
  - while( $j < n$ )
    -  $A[j] \leftarrow A[j] + 10$ 
    -  $j \leftarrow j + 3$ 

```

```

Alg2( $A, n$ )
- for  $i = 1$  to  $n$ 
  - for  $j = 2i$  to  $n$ 
    -  $A[i] \leftarrow A[j] + 1$ 

```

9. Find counterexamples to each of these statements about congruences:

- (a) If  $ac \equiv bc \pmod{m}$ , where  $a, b, c$ , and  $m$  are integers with  $m \geq 2$ , then  $a \equiv b \pmod{m}$ .
- (b) If  $a \equiv b \pmod{m}$  and  $c \equiv d \pmod{m}$ , where  $a, b, c, d$ , and  $m$  are integers with  $c$  and  $d$  positive and  $m \geq 2$ , then  $a^c \equiv b^d \pmod{m}$ .
